Project Abstract Submission Form

Sec No- 8	Team No- 2	Project Title- Women Safety App with SOS & Live Tracking
-----------	------------	--

1. Abstract

Women's safety is an important concern, especially when travelling alone or during emergency situations. In critical situations, a person may not have enough time to call family members, friends, or emergency services manually. To address this problem, the proposed Women Safety App with SOS & Live Tracking provides a quick and reliable way for users to request help and share their real-time location with trusted contacts.

The application provides an SOS emergency button that can be activated during dangerous situations. When the SOS feature is triggered, the application can send an emergency alert along with the user's current location to selected emergency contacts. The live tracking feature allows authorized contacts to monitor the user's location during an active emergency. The system can also maintain registered user details, emergency contacts, alert information, and location related data using a database.

The proposed system consists of a user-friendly frontend, backend services for processing requests, and a database for securely managing application data. The project aims to provide a simple, fast, and accessible safety solution that can help users communicate their emergency status and location to trusted people when immediate assistance is required.

2. Team Details

Roll Number(s)	Name of the Student	Signature
2520030499	G . SAHITHI	
2520030557	B . JASMITHA	

3. Frameworks / Platforms / Software Used

Frontend: HTML5, CSS3, JavaScript, Responsive Web Design

Backend: Python ,Flask

Database: MongoDB

Location & Tracking: Geolocation API, GPS/Location Services, Maps API

Development Tools: Visual Studio, CodeGit & GitHub, Web Browser

Main Technologies / Features: User Registration and Login, Emergency Contact Management, SOS Emergency Alert, Real-Time/Live Location Tracking, Location Sharing, Emergency Alert History, Database Management, Responsive User Interface, Backend API Development, Secure Data Handling

Guide Name and signature (remarks if any)
